## Health Services Are at a Crossroads

**European healthcare systems have never been so tested.** The need to deliver more for less creates pressures and stresses - mostly on its people. They feel the weight of responsibility on their shoulders and want the peace of mind to be able to focus and do their best for patients.

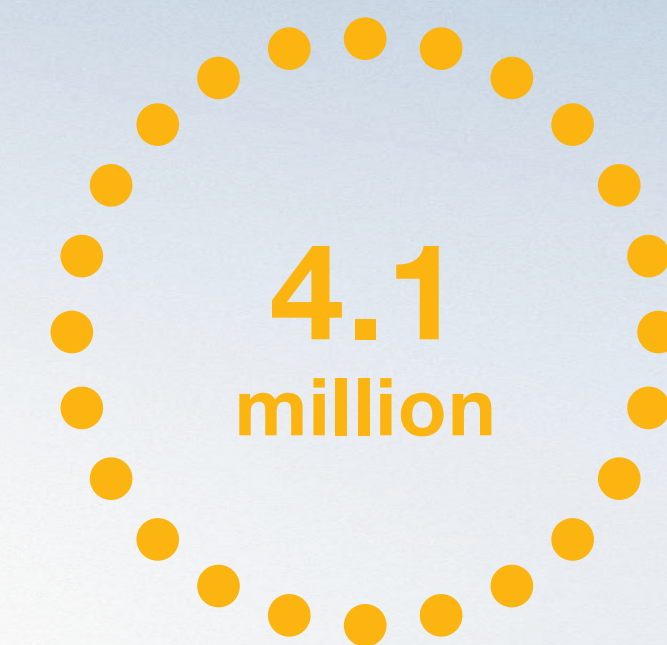

Advancing technology and digitalisation will provide some answers. But currently, in hospitals across the continent, quality patient care must be delivered consistently and in greater numbers every year. The best equipment is only as effective as the hands and minds driving it and the workflow it is a part of.

Burnout of European Doctors could be **up to 43.2%**.<sup>1</sup>

The level of job strain for nurses is 61%, **twice the EU average compared to other sectors**.<sup>2</sup>

A shortage of **4.1 million healthcare professionals** has been projected in the EU by 2030.<sup>3</sup>
