PHILIPS

Patient portal

Access.
Share.
Manage.

Put your patients in control

Let your patients **play a role** in their own care

The Patient Portal empowers patients to access, share and help manage their own images and exam data – using a range of familiar, user-friendly browser-enabled devices. It also allows real-time collaboration between patients and healthcare providers – helping to reduce the need for duplicate exams and the production of CDs, DVDs or films. Bottom line? Potential hours and dollars saved.

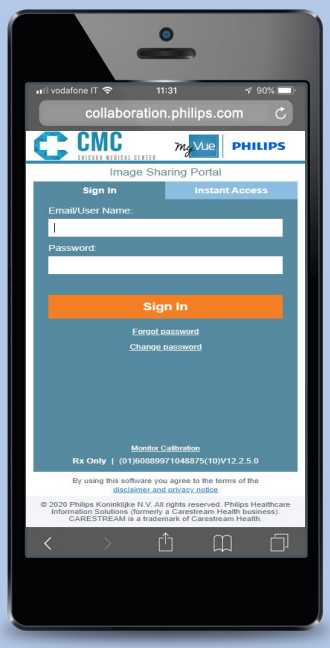
Harness the power of virtual sharing

The Patient Portal allows sharing of imaging results between facilities, patients and physicians. This enables collaborative workflow and empowers patients to control and manage their own health records. In addition to improving patient access, the Patient Portal can help reduce the need to focus staff and equipment resources on producing CDs, DVDs or films.

With the Patient Portal, a unique and secure log-in code is provided to patients after exams are performed. They can then access exam images and data from a variety of Web browser-enabled devices. Full reports can be viewed based on the facility's policy. Once registered, patients can grant permission to the individuals and facilities with whom they wish to share their images and data.

Advantages at a glance

- Easy, electronic image access and sharing helps support diagnoses and enhanced care.
- Security protocols allow images to remain private and secure – accessed only by those granted permission.
- The service can reduce the time and money wasted burning CDs or transporting film.
- Patients feel included in the management of their healthcare.



Benefits of the Patient Portal go beyond replacing CDs and DVDs

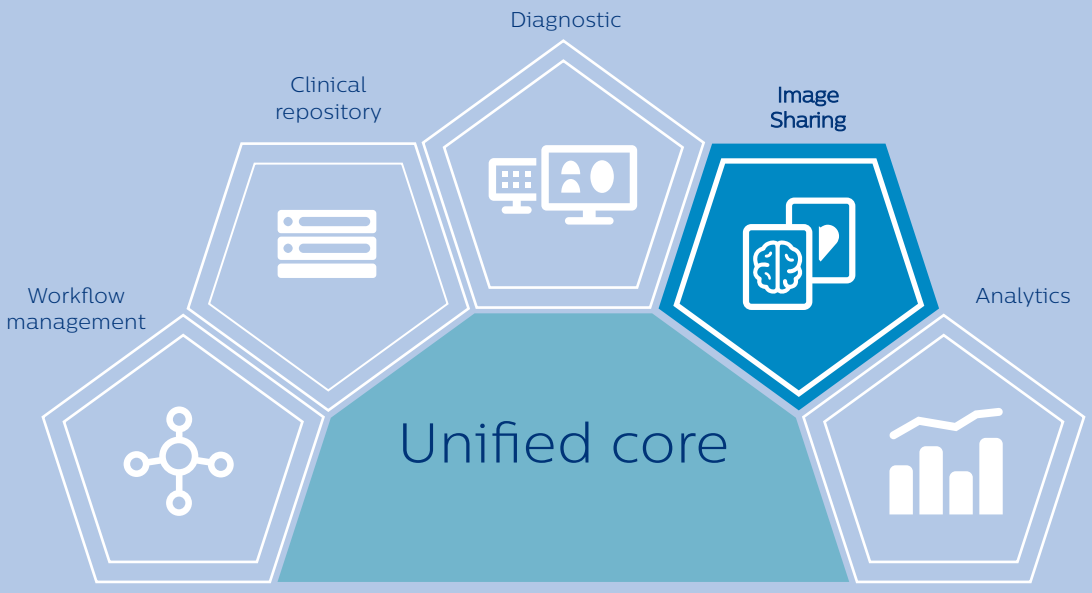
- This Philips technology fully complements existing EHR patient-portal strategy.
- The service can help reduce duplicate radiographic exams from various providers.
- A fully electronic process enables cost savings for imaging facilities, patients and insurance companies.
- The convenience of this portal can support patient satisfaction.
- Patient Portal is an extension of the Philips Enterprise Viewer.

Trusted partner

With thousands of sites and multiple Cloud data centers implemented globally, our services team is passionate about supporting you from day one. We have extensive knowledge in a variety of professional services: project management, integration, training, data migration and technical support. With this expertise and experience, along with 24/7 Remote Management Services monitoring your system, you can feel confident choosing Philips as your partner in Imaging IT.

Connecting people and data. Virtually anywhere.

Philips' image management offering establishes an inter operable clinical data ecosystem – connecting professionals with the imaging data they need across the continuum of care. This modular, multi-site, multi-domain standards-based Enterprise Imaging solution enables real-time, on-demand access to holistic clinical data for those involved in the care journey, including the patients.



Access, manage, share. **Virtually anywhere.**

Patients go online to access their exam results through a secure login.

Imaging records, including final diagnostic reports, are managed from a Web-enabled device.

Patients choose and authorize those with whom they wish to share their images.
